

## Beware of Splash-less and Scented Bleach Products

Many companies are making splash-less bleach products and bleach with fragrance added. Do not use these products for disinfecting or sanitizing in early care environments. Many of these products contain a 1% - 5% Sodium Hypochlorite concentration compared to a 8.25% Sodium Hypochlorite concentration in other chlorine bleaches, and **THEY DO NOT DISINFECT**. Read the label on the front and back of the bleach product to determine if the product says, **DISINFECTANT**. Scented bleach products also contain chemicals that may cause breathing problems in children and adults. Please refer to the Child Care Health Consultation Cleaning/Sanitizing/Disinfecting poster at this link, or call your local CCHC, for more information on cleaning, sanitizing, and disinfecting in early care environments:
